INTRO TO GASES

Gases in Air

- Look at the air around us.
  - Can you see any gases?
  - Which ones do you know or think are present?

- Air is made up of:
  - 78.09% Nitrogen
  - 20.95% Oxygen
  - 0.93% Argon
  - 0.04% Caron Dioxide
  - 0.4-1% Water
  - Other gases in variable amounts

- Why study gases and their behaviour?
  - Medicine, scuba diving, food industry… etc!

TO DO

- Read text p.416-423
  - -make notes by following questions on gas handout package

    (Kinetic Molecular Theory = KMT)

- Text Questions p.423 #1-8

- Study for solutions unit test! (ON WEDNESDAY)
  - Unit test review

Solubility Unit Review

<u>Chapter 8</u>: Solutions and Their Concentrations

- Types of Solutions
- Rates of Dissolving and Solubility (factors, solubility graphs, solubility problems)
- Concentration of Solutions (m/v%, m/m%, v/v%, ppm, ppb, molarity, C=n/v)
- Preparing Solutions (from a solid [m=CVM], by dilution [$C_1V_1=C_2V_2$])
- Dilution problems ($C_1V_1=C_2V_2$)

<u>Chapter 9</u>: Aqueous Solutions

- Predicting Solubility
- Reactions in Aqueous Solutions
- Writing Ionic Equations
- Stoichiometry in Solution Chemistry

<u>Chapter 10</u> : Acids and Bases

- Acid–base Theories and Properties
- Acid-base Strength (strong, weak, pH)
