

RAFT Assignment: Explaining Solubility

	Role	Audience	Format	Topic
1	Polar molecule	Another polar molecule	Love letter	Profession of love ... obviously
2	Ionic compound	Family back home	Post card	Vacation is great, going swimming today
3	Non-polar molecule	Self	Diary entry	“polar molecules don’t like me”
4	Non-polar molecule	Another non-polar molecule	Email or series of text messages	Making plans for the weekend, etc.

- Choose one or two of the options given (see teacher instructions for current semester). (1 or 2, and 3 or 4)
- Your answer must mention **specific molecules (eg sugar or methane etc) and their interactions with another molecule as this is a SOLUTIONS activity**.
- Your answer must contain a discussion of intermolecular forces that are involved.
- Your work will be evaluated with the rubric below.

	Level 4	Level 3	Level 2	Level 1
Knowledge/Understanding				
explain the process of formation for solutions, including how molecule polarity and intermolecular forces are involved	explanation of concept provided thorough details; no errors or omissions	explanation of concept provided considerable details; few errors or omissions	explanation of concept provided some details; some errors or omissions	explanation of concept provided limited details; many errors or omissions
Communication				
use appropriate terminology related to aqueous solutions and solubility	demonstrates a high level of ability to communicate information using appropriate terminology	demonstrates considerable ability to communicate information using appropriate terminology	demonstrates some ability to communicate information using appropriate terminology	demonstrates limited ability to communicate information using appropriate terminology
