2D	7A
3D	8B
4C	9A
5E	10D

Matching

1D	6L
2G	7B
3J	8I
4A	9C
5K	10E

Short Answer

1. Rainwater usually is slightly acidic with a pH around 5.0. When carbon dioxide dissolves in the rainwater it forms carbonic acid. This then results in the pH to change to 5.6.

2a) Complete combustion occurs when all the combustible elements has been fully oxidized.

Incomplete combustion occurs when some of the combustible elements has not been fully oxidized.

2b) Carbon monoxide is a poisonous gas because it forms a complex with hemoglobin. This prevents hemoglobin from carrying oxygen round the body.
