

Neutralization Worksheet &

An antacid tablet contains 0.912 g aluminum hydroxide to neutralize excess stomach acid. What volume of 0.10 mol/L stomach acid (assume $\text{HCl}_{(\text{aq})}$) can one tablet neutralize?

Slaked lime, $\text{Ca}(\text{OH})_{2(\text{s})}$, can be used to neutralize the water in lakes that have been "killed" by acid rain. Ecologists hope that the original plants and animals will become reestablished. If the concentration of sulfuric acid in an acid lake is $1.2 \times 10^{-3} \text{ mol/L}$, and 1.0 t of slaked lime is added to the lake, then what is the volume of the lake that could be neutralized?
