

Name: _____

Stoichiometry Particle Practice

If **460 grams of S_8** are reacted, **how many particles of O_2** will also be reacted?

If **36.790 grams of SO_3** are produced, **how many grams of S_8** were reacted?

If **5.4×10^{22} particles of O_2** are produced, **how many grams of Ag_2O** were reacted?

If **81.12 grams of AgNO_3** are reacted, **how many particles of Ag_2SO_4** will be produced?

If **8.9×10^{22} particles of O_2** are produced, **how many particles of Ag_2O** were reacted?

If **5.7×10^{24} particles of $\text{Ca}(\text{OH})_2$** are reacted, **how many grams of $\text{HC}_2\text{H}_3\text{O}_2$** will also be reacted?

If **337 grams of O_2** are reacted, **how many grams of H_2O** will be produced?

If **2.5×10^{23} particles of Cl_2** are reacted, **how many grams of FeCl_2** will also be reacted?

If **378.7 grams of O_2** are reacted, **how many particles of H_2O** will be produced?

If **48.9 grams of CaCl_2** are produced, **how many grams of O_2** will also be produced?
