

"Perhaps one of you gentlemen would mind telling me just what it is outside the window that you find so attractive...?"

Binary Ionic Nomenclature

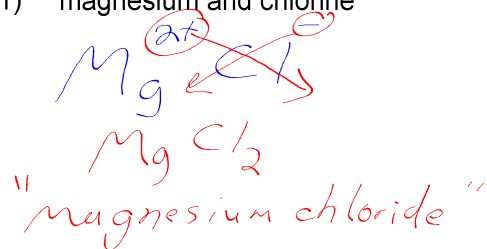

Recall: a cation is named with its regular name; Mg^{2+} is the "magnesium ion"
an anion is named with the *-ide* suffix; Cl^- is the "chloride ion"

Formulas

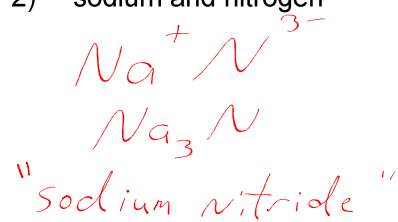

- Step 1) Write the chemical symbols
- Step 2) Add the ionic charge
- Step 3) Determine how many ions of each type are required to bring the total charge to zero. All compounds are neutral in charge. **Crisscross Method**

Ex) Write the chemical formula for the following ionic compounds, and name the compounds:

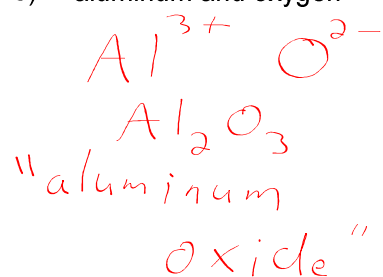

1) magnesium and chlorine

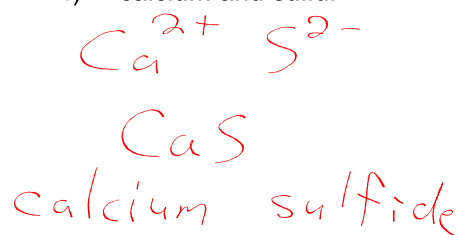

2) sodium and nitrogen

3) aluminum and oxygen

4) calcium and sulfur
