

## Multivalent Ions

- Some elements can form more than one ion
- There are 2 systems in use to name these ions

IUPAC – International Union of Pure & Applied Chemists

| <b>Ion</b>       | <b>Stock Name<br/>(old method)</b> | <b>IUPAC Name<br/>(new method)</b> |
|------------------|------------------------------------|------------------------------------|
| $\text{Fe}^{2+}$ | Ferrous                            | Iron (II)                          |
| $\text{Fe}^{3+}$ | Ferric                             | Iron (III)                         |
| $\text{Cu}^{1+}$ | Cuprous                            | Copper (I)                         |
| $\text{Cu}^{2+}$ | Cupric                             | Copper (II)                        |
| $\text{Zn}^{2+}$ | -----                              | Zinc                               |
| $\text{Ag}^{+}$  | -----                              | Silver                             |
| $\text{Co}^{2+}$ | Cobaltous                          | Cobalt (II)                        |
| $\text{Co}^{3+}$ | Cobaltic                           | Cobalt (III)                       |
| $\text{As}^{3+}$ | Arsenious                          | Arsenic (III)                      |
| $\text{As}^{5+}$ | Arsenic                            | Arsenic (V)                        |
| $\text{Cd}^{2+}$ | -----                              | Cadmium                            |
| $\text{Sn}^{2+}$ | Stannous                           | Tin (II)                           |
| $\text{Sn}^{4+}$ | Stannic                            | Tin (IV)                           |
| $\text{Sb}^{3+}$ | Antimonous                         | Antimony (III)                     |
| $\text{Sb}^{5+}$ | Antimonic                          | Antimony (V)                       |
| $\text{Au}^{1+}$ | Aurous                             | Gold (I)                           |
| $\text{Au}^{3+}$ | Auric                              | Gold (III)                         |
| $\text{Hg}^{1+}$ | Mercurous                          | Mercury (I)                        |
| $\text{Hg}^{2+}$ | Mercuric                           | Mercury (II)                       |
| $\text{Pb}^{2+}$ | Plumbous                           | Lead (II)                          |
| $\text{Pb}^{4+}$ | Plumbic                            | Lead (IV)                          |

Note: The ion with the lower valence has an “ous” suffix and the higher one has an “ic” suffix.

### Multivalent Ionic Bonding

- Same rules apply as in ionic bonding
- Only this time the old **stock name** may be used and if the **IUPAC** system is used, the charge on the metallic ion must be shown in roman numerals.
- The numbers in roman numerals refers to the charge on the metallic ions

Example:

Example 1)

Write the chemical name for  $\text{BeH}_2$

Solution 1)

1. Write the names of the cation and the anion. The anion must end in the suffix “-ide”

*beryllium hydride*

2. Since beryllium has a fixed valence, we are finished.

Example 2)

Write the chemical name for  $\text{FeS}$

Solution 2)

1. Write the names of the cation and the anion. The anion must end in the suffix “-ide”

*iron sulfide*

2. Since iron has more than one valence, use the subscripts to determine the charges on the ions.

$\text{Fe}^{3+} \text{S}^{3-}$      *but the charge on S is 2-!*  
 $\text{Fe}^{2+} \text{S}^{2-}$      *iron (II) sulfide*

Give the correct formula:

| Chemical Name            | Ions Formed                       | Chemical Formula        |
|--------------------------|-----------------------------------|-------------------------|
| Cobalt (II) chloride     | $\text{Co}^{2+}$ $\text{Cl}^{1-}$ | $\text{CoCl}_2$         |
| Tin (IV) nitride         | $\text{Sn}^{4+}$ $\text{N}^{3-}$  | $\text{Sn}_3\text{N}_4$ |
| Zinc iodide              | $\text{Zn}^{2+}$ $\text{I}^{1-}$  | $\text{ZnI}_2$          |
| Plumbous chloride        | $\text{Pb}^{2+}$ $\text{Cl}^{1-}$ | $\text{PbCl}_2$         |
| Silver Bromide           | $\text{Ag}^{+}$ $\text{Br}^{1-}$  | $\text{AgBr}$           |
| Antimony (III) phosphide | $\text{Sb}^{3+}$ $\text{P}^{3-}$  | $\text{SbP}$            |
| Mercuric oxide           | $\text{Hg}^{2+}$ $\text{O}^{2-}$  | $\text{HgO}$            |
| Cupric bromide           | $\text{Cu}^{2+}$ $\text{Br}^{1-}$ | $\text{CuBr}_2$         |
| Ferric sulphide          | $\text{Fe}^{3+}$ $\text{S}^{2-}$  | $\text{Fe}_2\text{S}_3$ |
| Mercurous iodide         | $\text{Hg}^{+}$ $\text{I}^{1-}$   | $\text{HgI}$            |

Name the following compounds:

| Chemical Name           | IUPAC Name           | Stock Name        |
|-------------------------|----------------------|-------------------|
| $\text{CuO}$            | Copper (II) Oxide    | Cupric Oxide      |
| $\text{SnF}_4$          | Tin (IV) fluoride    | Stannic fluoride  |
| $\text{PbCl}_4$         | Lead (IV) chloride   | Plumbic chloride  |
| $\text{AsCl}_5$         | Arsenic (V) chloride | Arsenic chloride  |
| $\text{AgBr}$           | Silver bromide       | -----             |
| $\text{CdI}_2$          | Cadmium Iodide       | -----             |
| $\text{ZnO}$            | Zinc Oxide           | -----             |
| $\text{Sb}_2\text{O}_3$ | Antimony (III) Oxide | Antimonious Oxide |
| $\text{Fe}_2\text{O}_3$ | Iron (III) Oxide     | Ferric Oxide      |
| $\text{AuBr}_3$         | Gold (III) bromide   | Auric bromide     |

Write the chemical formula for the following binary ionic compounds:

|                           |                         |
|---------------------------|-------------------------|
| a) Calcium chloride       | $\text{CaCl}_2$         |
| b) Potassium oxide        | $\text{K}_2\text{O}$    |
| c) Lithium nitride        | $\text{Li}_3\text{N}$   |
| d) Cadmium oxide          | $\text{CdO}$            |
| e) Silver chloride        | $\text{AgCl}$           |
| f) Mercury (I) sulfide    | $\text{Hg}_2\text{S}$   |
| g) Barium fluoride        | $\text{BaF}_2$          |
| h) Sodium bromide         | $\text{NaBr}$           |
| i) Zinc iodide            | $\text{ZnI}_2$          |
| j) Copper (II) chloride   | $\text{CuCl}_2$         |
| k) Gold (I) iodide        | $\text{AuI}$            |
| l) Nickel (II) sulfide    | $\text{NiS}$            |
| m) Aluminum hydride       | $\text{AlH}_3$          |
| n) Iron (III) chloride    | $\text{FeCl}_3$         |
| o) Potassium nitride      | $\text{K}_3\text{N}$    |
| p) Magnesium nitride      | $\text{Mg}_3\text{N}_2$ |
| q) Tin (IV) fluoride      | $\text{SnF}_4$          |
| r) Iron (III) sulfide     | $\text{Fe}_2\text{S}_3$ |
| s) Cobalt (II) bromide    | $\text{CoBr}_2$         |
| t) Manganese (II) sulfide | $\text{MnS}$            |
| u) Lead (IV) oxide        | $\text{PbO}_2$          |
| v) Cadmium chloride       | $\text{CdCl}_2$         |
| w) Strontium oxide        | $\text{SrO}$            |
| x) Chromium (II) fluoride | $\text{CrF}_2$          |
| y) Lithium sulfide        | $\text{Li}_2\text{S}$   |
| z) Silver oxide           | $\text{Ag}_2\text{O}$   |

Give the chemical name for the following binary ionic compounds. Include both the IUPAC and stock names, where applicable.

- |                                   |                                   |
|-----------------------------------|-----------------------------------|
| a) FeS                            | Iron (II) / Ferrous sulfide       |
| b) CrCl <sub>3</sub>              | Chromium (III) / Chromic chloride |
| c) MgO                            | Magnesium oxide                   |
| d) AlCl <sub>3</sub>              | Aluminum chloride                 |
| e) LiF                            | lithium fluoride                  |
| f) K <sub>2</sub> S               | potassium sulfide                 |
| g) ZnBr <sub>2</sub>              | zinc bromide                      |
| h) FeO                            | Iron (II) / Ferrous oxide         |
| i) Fe <sub>2</sub> O <sub>3</sub> | Iron (III) / Ferric oxide         |
| j) NiF <sub>2</sub>               | nickel (II) / nickelous fluoride  |
| k) CuS                            | copper(II) / cupric sulfide       |
| l) Hg <sub>2</sub> O              | mercury (I) / mercurous oxide     |
| m) AlN                            | aluminum nitride                  |
| n) BaBr <sub>2</sub>              | barium bromide                    |
| o) Ag <sub>2</sub> S              | silver sulfide                    |
| p) BiCl <sub>3</sub>              | bismuth (III) / bismous chloride  |
| q) SnO                            | Tin (II) / stannous oxide         |
| r) CdS                            | cadmium sulfide                   |
| s) MnO <sub>2</sub>               | manganese (IV) / manganic oxide   |
| t) SrH <sub>2</sub>               | strontium hydride                 |
| u) AuF                            | gold (I) / aurous fluoride        |
| v) UF <sub>4</sub>                | uranium (IV) / uranous fluoride   |
| w) Co <sub>2</sub> O <sub>3</sub> | cobalt (III) / cobaltic oxide     |
| x) K <sub>3</sub> N               | potassium nitride                 |
| y) PbI <sub>2</sub>               | lead (II) / plumbous iodide       |
| z) SnO <sub>2</sub>               | tin (IV) / stannic oxide          |

## Polyatomic Anions (Negative Ions)

Polyatomic ions consist of **groups of atoms** that carry an overall negative charge. Since these are very common and have their own special name, you are required to learn them. Treat polyatomic ions as a “package deal”.

| <b>-1</b>                          |                    | <b>-2</b>                    |            | <b>-3</b>          |           |
|------------------------------------|--------------------|------------------------------|------------|--------------------|-----------|
| $\text{C}_2\text{H}_3\text{O}_2^-$ | Acetate            | $\text{CO}_3^{2-}$           | Carbonate  | $\text{PO}_4^{3-}$ | Phosphate |
| $\text{CH}_3\text{COO}^-$          |                    |                              |            |                    |           |
| $\text{ClO}_3^-$                   | Chlorate           | $\text{SO}_4^{2-}$           | Sulphate   |                    |           |
| $\text{BrO}_3^-$                   | Bromate            | $\text{CrO}_4^{2-}$          | Chromate   |                    |           |
| $\text{IO}_3^-$                    | Iodate             | $\text{C}_2\text{O}_4^{2-}$  | Oxalate    |                    |           |
| $\text{HCO}_3^-$                   | Bicarbonate        | $\text{Cr}_2\text{O}_7^{2-}$ | Dichromate |                    |           |
|                                    | Hydrogen Carbonate |                              |            |                    |           |
| $\text{NO}_3^-$                    | Nitrate            |                              |            |                    |           |
| $\text{MnO}_4^-$                   | Permanganate       |                              |            |                    |           |
|                                    |                    |                              |            |                    |           |
| $\text{SCN}^-$                     | Thiocyanate        |                              |            |                    |           |
| $\text{CN}^-$                      | Cyanide            |                              |            |                    |           |
| $\text{OH}^-$                      | Hydroxide          |                              |            |                    |           |
| $\text{HSO}_4^-$                   | Hydrogen Sulphate  |                              |            |                    |           |
| $\text{HS}^-$                      | Hydrogen Sulfide   |                              |            |                    |           |

Complex Oxyanions: contain oxygen

There is only one **polyatomic cation** (positive polyatomic ion)

**Ammonium**  $\text{NH}_4^+$

*Not to be confused with*      **Ammonia**  $\text{NH}_3$

## Sample Problems:

| Name                 | Ions                                | Chemical Formula            |
|----------------------|-------------------------------------|-----------------------------|
| Sodium Carbonate     | $\text{Na}^{1+}$ $\text{CO}_3^{2-}$ | $\text{Na}_2\text{CO}_3$    |
| Copper (II) Sulphate | $\text{Cu}^{2+}$ $\text{SO}_4^{2-}$ | $\text{CuSO}_4$             |
| Copper (II) Bromate  | $\text{Cu}^{2+}$ $\text{BrO}_3^-$   | $\text{Cu}(\text{BrO}_3)_2$ |

## Nomenclature for Oxyanions

| O's       | Formula          | Name                | Style        |
|-----------|------------------|---------------------|--------------|
| One more  | $\text{ClO}_4^-$ | <b>Perchlorate</b>  | Per.....ate  |
| -----     | $\text{ClO}_3^-$ | <b>Chlorate</b>     | .....ate     |
| One fewer | $\text{ClO}_2^-$ | <b>Chlorite</b>     | .....ite     |
| Two fewer | $\text{ClO}^-$   | <b>Hypochlorite</b> | Hypo.....ite |

Example:

$\text{IO}_2^-$  **Iodate** (parent name) becomes **Iodite** (*one fewer oxygen*)

$\text{KNO}_2$  Potassium Nitrite

| Chemical Equation  | Name               |
|--------------------|--------------------|
| $\text{SO}_3^{2-}$ | <b>Sulfite</b>     |
| $\text{BrO}_3^-$   | <b>Bromate</b>     |
| $\text{BrO}_2^-$   | <b>Bromite</b>     |
| $\text{BrO}^-$     | <b>Hypobromite</b> |
| $\text{IO}_4^-$    | <b>Periodate</b>   |
| $\text{IO}_3^-$    | <b>Iodate</b>      |
| $\text{IO}_2^-$    | <b>Iodite</b>      |

**Practice Problems**

| <b>Chemical Equation</b>     | <b>Name</b>             |
|------------------------------|-------------------------|
| $\text{Na}_2\text{CO}_3$     | Sodium carbonate        |
| $\text{Pb}(\text{NO}_3)_4$   | Lead (IV) nitrate       |
| $\text{Sn}(\text{ClO})_2$    | Tin (II) hypochlorite   |
| $\text{Ag}_2\text{SO}_3$     | Silver sulfite          |
| $\text{Mg}_3(\text{PO}_2)_2$ | Magnesium hypophosphite |
| $\text{Ca}(\text{NO}_2)_2$   | Calcium nitrite         |
| $\text{AlPO}_4$              | Aluminum phosphate      |
| $\text{KIO}$                 | Potassium hypoiodite    |
| $\text{Zn}(\text{BrO}_4)_2$  | Zinc perbromate         |
| $\text{CuClO}$               | Copper (I) hypochlorite |
| $\text{Hg}(\text{IO}_4)_2$   | Mercuric periodate      |
| $\text{Ca}(\text{BrO})_2$    | Calcium hypobromite     |
| $\text{K}_2\text{SO}_3$      | Potassium sulfite       |
| $\text{Ni}(\text{ClO}_2)_2$  | Nickel (II) chlorite    |
| $\text{Al}_2(\text{CO}_3)_3$ | Aluminum carbonate      |
| $\text{Sn}(\text{IO}_4)_2$   | Stannous periodate      |
| $\text{Au}(\text{BrO}_3)_3$  | Gold (III) bromate      |
| $\text{CuSO}_4$              | Copper (II) sulphate    |
| $\text{NaNO}_2$              | Sodium nitrite          |
| $\text{Pb}(\text{IO}_4)_4$   | Lead (IV) periodate     |

## Oxy-acids

**Oxy** – meaning they contain oxygen    **Acid** – meaning they contain hydrogen

### Naming:

All oxy-acids get their name logically from their parent oxyanions by changing the ending from “-ate” to “-ic acid”

### -ic Acids

| <b>H</b>          |                      | <b>H<sub>2</sub></b>           |                        | <b>H<sub>3</sub></b>           |                         |
|-------------------|----------------------|--------------------------------|------------------------|--------------------------------|-------------------------|
| HClO <sub>3</sub> | Chlor <b>ic</b> Acid | H <sub>2</sub> SO <sub>4</sub> | Sulphur <b>ic</b> Acid | H <sub>3</sub> PO <sub>4</sub> | Phosphor <b>ic</b> Acid |
| HBrO <sub>3</sub> | Brom <b>ic</b> Acid  | H <sub>2</sub> CO <sub>3</sub> | Carbon <b>ic</b> Acid  |                                |                         |
| HNO <sub>3</sub>  | Nitr <b>ic</b> Acid  |                                |                        |                                |                         |
| HIO <sub>3</sub>  | Iod <b>ic</b> Acid   |                                |                        |                                |                         |

### -ous Acids      *Oxyacids with one less oxygen than their parents*

| <b>H</b>          |                       | <b>H<sub>2</sub></b>           |                         | <b>H<sub>3</sub></b>           |                          |
|-------------------|-----------------------|--------------------------------|-------------------------|--------------------------------|--------------------------|
| HClO <sub>2</sub> | Chlor <b>ous</b> Acid | H <sub>2</sub> SO <sub>3</sub> | Sulphur <b>ous</b> Acid | H <sub>3</sub> PO <sub>3</sub> | Phosphor <b>ous</b> Acid |
| HBrO <sub>2</sub> | Brom <b>ous</b> Acid  | -----                          |                         |                                |                          |
| HNO <sub>2</sub>  | Nitr <b>ous</b> Acid  |                                |                         |                                |                          |
| HIO <sub>2</sub>  | Iod <b>ous</b> Acid   |                                |                         |                                |                          |

### Hypo- -ous Acids      *Oxyacids with two less oxygen than their parents*

| <b>H</b> |                           | <b>H<sub>2</sub></b> |  | <b>H<sub>3</sub></b>           |                              |
|----------|---------------------------|----------------------|--|--------------------------------|------------------------------|
| HClO     | Hypochlor <b>ous</b> Acid | -----                |  | H <sub>3</sub> PO <sub>2</sub> | Hypophosphor <b>ous</b> Acid |
| HBrO     | Hypobrom <b>ous</b> Acid  | -----                |  |                                |                              |
| -----    |                           |                      |  |                                |                              |
| HIO      | Hypoiod <b>ous</b> Acid   |                      |  |                                |                              |

### Per---ic Acids      *Oxyacids with one more oxygen than their parents*

| <b>H</b>          |                         | <b>H<sub>2</sub></b> |  | <b>H<sub>3</sub></b> |  |
|-------------------|-------------------------|----------------------|--|----------------------|--|
| HClO <sub>4</sub> | Perchlor <b>ic</b> Acid | -----                |  | -----                |  |
| HBrO <sub>4</sub> | Perbrom <b>ic</b> Acid  | -----                |  |                      |  |
| -----             |                         |                      |  |                      |  |
| HIO <sub>4</sub>  | Period <b>ic</b> Acid   |                      |  |                      |  |

## Binary Acids

The following is a list of common binary acids that must be memorized:

| <b>Name</b>                                   | <b>Formula</b>    |
|-----------------------------------------------|-------------------|
| Hydrochloric acid <i>or</i> hydrogen chloride | HCl               |
| Hydrofluoric acid <i>or</i> hydrogen fluoride | HF                |
| Hydroiodic acid <i>or</i> hydrogen iodide     | HI                |
| Hydrobromic acid <i>or</i> hydrogen bromide   | HBr               |
| Hydrosulfuric acid <i>or</i> hydrogen sulfide | H <sub>2</sub> S  |
| Hydroselenic acid <i>or</i> hydrogen selenide | H <sub>2</sub> Se |

Note – these do not contain oxygen

## Practice Problems

| Chemical Equation                             | Name                |
|-----------------------------------------------|---------------------|
| HCl                                           | Hydrochloric acid   |
| H <sub>2</sub> SO <sub>4</sub>                | Sulfuric acid       |
| HNO <sub>2</sub>                              | Nitrous acid        |
| HBr                                           | Hydrobromic acid    |
| HClO <sub>4</sub>                             | Perchloric acid     |
| H <sub>2</sub> Se                             | Hydroselenic acid   |
| HBrO <sub>3</sub>                             | Bromic acid         |
| H <sub>2</sub> CO <sub>3</sub>                | Carbonic acid       |
| H <sub>3</sub> PO <sub>4</sub>                | Phosphoric acid     |
| HIO                                           | Hypoiodous acid     |
| HC <sub>2</sub> H <sub>3</sub> O <sub>2</sub> | Acetic acid         |
| HF                                            | Hydrofluoric acid   |
| H <sub>3</sub> PO <sub>3</sub>                | Phosphorous acid    |
| HClO <sub>2</sub>                             | Chlorous acid       |
| HNO <sub>3</sub>                              | Nitric acid         |
| HBr                                           | Hydrobromic acid    |
| HI                                            | Hydroiodic acid     |
| H <sub>2</sub> S                              | Hydrosulphuric acid |
| H <sub>2</sub> SO <sub>3</sub>                | Sulphurous acid     |
| HIO <sub>2</sub>                              | Iodous acid         |
| HIO <sub>4</sub>                              | Periodic acid       |
| HNO <sub>2</sub>                              | Nitrous acid        |
| H <sub>2</sub> CO <sub>3</sub>                | Carbonic acid       |
